Connecting to the Network in the Library Study Rooms

Windows 95/98/Me Network Configuration

- **Right-Click** on the Network Neighborhood icon and choose **Properties**

- Make sure that the **TCP/IP** Protocol is listed. (If you have other adapters than just a network card listed, such as “Dial-up Adapter”, make sure there is a TCP/IP listing with the network card’s name beside it.) If it is not there, Choose **Add —> Protocol —> Microsoft TCP/IP**

- Click on the **TCP/IP** that is appropriate for your Network Card and choose **Properties**

- Click on the **IP Address** Tab

- Select the radio button labeled: **Obtain IP Address Automatically**

- Click on the **WINS** Tab

- Select the radio button labeled: **Use DHCP for WINS Resolution**

- Click on the **Advanced** Tab

- Check the box labeled: **Set the Protocol to be the Default Protocol**

- Click on the **DNS** Tab

- Select the radio button labeled: **Disable DNS**

- Click **OK**, until you are back to the desktop.

- If your computer does not restart automatically, please **restart it**.

Your internet browser and other network tasks should now be working. If you have problems, contact MicroSupport 372-6315
