Connecting to the Network in the Library Study Rooms

Windows XP Network Configuration

- From the Start menu select Control Panel
- Double-click on Network Connections

- Right-click on Local Area Connection and select Properties

- Scroll down to Internet Protocol (TCP/IP) and select it.
- Click Properties

If Internet Protocol (TCP/IP) does not exist:

- Click on the Install button
- Select Protocol from the list
- Click the Add button
- Select Microsoft in the left list and then choose TCP/IP in the right list
- Click OK
• Verify that **Obtain an IP address automatically** and **Obtain DNS server address automatically** are chosen.
• Click **OK**

---

**Remove Firewall**

*We’ve noticed that the Windows XP Internet Connection Firewall tends to stop connections from working properly.*

**To disable this:**

• Click the **Advanced** tab
• Remove the checkmark by **Protect my computer...**
• Click **OK** until you get back to the desktop.

---

Your internet browser and other network tasks should now be working.
*If you have problems, contact MicroSupport 372-6315*
